# CRIssoft

Software that thinks

## COMPANY PROFILE

Among the most important suppliers of IT systems dedicated to business management in Romania, CRIssoft remains the most stable company of the IT&C market, with more than 20 years of activity. All this time, it has been one of the top largest software companies in the country. Established in 1991, CRIssoft has gained vast experience in the analysis, design, development and implementation of integrated software solutions.

CRIssoft products and services, but also the constant preoccupation to know the clients' needs, to optimize their business process and even to set new standards in certain industries, have contributed to the maintenance of a vast portfolio of important clients from different fields of activity.

The experience included in the CRIssoft Organization Server – CROS, together with the software technology and the implementation methodology secure maximum cost-performance efficiency through:

- The combination of a ready-to-use solution (generated models) and the flexibility of a solution developed internally or 100% upon demand;
- The adaptation of the general model (the general business practices) by implementing the organization's specificity;
- The reduction of the costs related to the design, maintenance and pace-keeping with the technological evolution of a ready-to-use system or switch-on system.

## OWN PRODUCTS

The CRIssoft solutions are used by a large variety of clients from different industries (distribution, production, utilities, services, leasing and insurance, trade). For each of these industries there are specific functionalities (billing, barcode identification) and specific adaptations (automated production line interfaces, branch data centralization, mobile barcode reader interfaces, IVR system interfaces).

The range of CRIssoft products is CROS™ (CRIssoft Organization Server™) – a modular, open and flexible integrated IT system designed for the organizations' management: CROS ERP, CROS FRC (Supply, Billing and Customer Relations system destined for public utility companies); CROS CRM, CROS Cloud Companies, CROS WMS, CROS Supply Chain, CROS Logistics Center; CROS Leasing - Insurance; CROS Service; CROS Barcodes; CROS Production Planning; CROS Budget Control; CROS integration with GIS (Geographic Information System).

The newest solution developed by CRIssoft is CROS MyAccount, a tool that enables companies to be one click away from connecting to their clients. CROS MyAccount offers the organizations' customers acces to information regarding their billing history, invoices, consumption, online payment etc. and it can be accessed through CROS Web (web interface) or CROS Mobile (Android and iOS application). Using this solution results in the development of B2C relationships and in lower costs regarding infrastructure and personnel.
